Respected Sir,

We are students from Vidyalankar Institute of Technology, Wadala, Mumbai, working on an initiative related to sustainable e-waste management.

While studying existing e-waste recovery methods, we have been exploring a possible modification that could be adapted to Mizoram's local requirements. The idea focuses on recovering reusable electronic components and separating valuable materials before the remaining waste is sent for further processing. We are exploring a modular dismantling and sorting mechanism that could make preliminary recovery more practical at smaller collection hubs.

We would value the opportunity to share this concept with you and learn whether it could be relevant to e-waste management efforts in Mizoram. We are also interested in understanding the practical requirements for developing and evaluating this approach further.

Additionally, we would be honoured if you would be willing to deliver a guest lecture at Vidyalankar Institute of Technology, Wadala, on environmental sustainability and e-waste management. It would be a valuable opportunity for our students to learn from your experience and perspective.

Thank you for your time and consideration. We look forward to hearing from you.

Regards,
Team: Sakshi Sawant, Saloni Ghutukade, Hritvi Narvekar
